

## Webcam brand captures the most detailed image ever taken of New York

By [Fernando Gonzalo](#) April 29, 2021

New York is one of the cities with the most tourism in the world, and therefore also one of the most photographed. Surely there are millions of snapshots of your skyline, but **none are as impressive as the one taken by the company EarthCam.**

This company dedicated to the manufacture of webcams has wanted to show off the benefits of its new GigapixelCam X80, taking a **historical photograph from the top of the Empire State Building.**

The result is an 80 gigapixel panoramic image that has become **the most accurate photo ever taken of The Big Apple**, allowing users to see the city from a bird's eye view by zooming in to an astonishing level of detail.

The company has uploaded the photo to a website where they **have also indicated some of the points of interest** in New York, simulating the sensation of being on top of the Empire State Building looking through powerful binoculars.

According to EarthCam, the resolution of the GigapixelCam X80 is **700% higher than its previous webcam with higher resolution**, being a considerable jump in performance. The new model offers 360 degrees of rotation using an ultra-precise military-grade pan, tilt and zoom base and high-speed remote control over IP, 4G LTE and 5G networks.

If you are interested in taking a **virtual tour of New York** through this spectacular photograph, [you can do it from here](#), but we warn you that it hooks ...
