

Autodesk Selects EarthCam as Construction Cloud Premium Partner

By Retrofit Magazine Editor, August 5, 2022

EarthCam, a provider of webcam technology and services, has been selected as an [Autodesk Construction Cloud](#) Premium Partner. EarthCam is the first camera company to be awarded this status, building on its long-established connectivity with Autodesk. EarthCam's live job-site cameras capture and deliver imagery to [Autodesk Build](#), the project management and field execution solution, as well as [BIM 360](#) and [PlanGrid](#). New [AI Object Detection and Safety Analytics](#) deliver actionable data to augment RFIs and reports.

On the design side, EarthCam empowers VDC teams with live imagery for 3D model overlays that improves collaboration and enables data-driven decision making. Comprehensive use of live construction cameras is becoming the norm for VDC teams and EarthCam leads the charge in merging real-time webcam imagery with Autodesk products throughout their entire lifecycle. Intelligent perspectives of job sites are created by infusing navigable Navisworks or Revit 3D models with EarthCam's 360-degree imagery, providing x-ray like insight, and clear visual evidence of progress. Synched live camera streams are meshed with model views, and users can zoom in on architectural details while immediately seeing the corresponding model alignment.

EarthCam remains committed to adding many new [image integration features](#) for Autodesk Construction Cloud for no additional charge to customers, helping construction teams make better, more timely decisions.
