

EarthCam Services Suite Expands Solutions

By SDM Editors, August 15, 2022

EarthCam's suite includes new perimeter security options utilizing cameras, software and UL-listed monitoring centers to view, verify and respond. EarthCam's new two-camera perimeter detection includes thermal and AI camera options plus "talk down" capabilities with a deterrent strobe to alert intruders. If a person or a vehicle enters a designated zone, alerts are sent to EarthCam's central station. EarthCam introduced an all-weather LPR service, designed to identify vehicles by their plates using optical character recognition. The system automatically handles access control, verifies deliveries and sends alerts to management. Reports are created of all access denials, unknown vehicles and approved entries with accompanying images.
